

TRANSFORMING HEALTHCARE INFORMATION TECHNOLOGY

ELIGIBILITY

Reduce Costs by Automating Insurance Verification

It is widely accepted by healthcare providers that insurance eligibility drives revenue. The Healthcare Financial Management Association (HFMA) has recently published information indicating that the automation of insurance verification processes actually **REDUCES** costs as well. In a recent **HFMA NEWS** article, HFMA has indicated that "the use of automated systems to verify patient insurance eligibility and benefits information could significantly reduce administrative costs."

Automate Patient Verification Processes with the PASHealth Transaction System

Patient Access Solutions (PASHEALTH) has proven eligibility verification solutions to ensure an accurate assessment of patient benefits coverage for timely reimbursement. Our PASHEALTH applications (either IP or Dial-Up) allow providers to automate the patient registration process with real-time patient eligibility data. Returned eligibility and benefit information can then be manually posted directly into the appropriate fields within the insurance segment of the patient's account or automatically populated through the patient registration form on the PAS Web Portal.

"Verifying insurance coverage with automated transactions can save up to 50%"

CLAIMS ANALYZER

A Logical and Cost Effective Claims Processing System

In its traditional paper form, medical and dental claims processing has always been an administrative burden to providers and payers alike. Paper handling and HCFA filing inefficiencies have led to many problems that incur a significant expense of time and money. For this application the PAS system has emerged as the logical and cost-effective solution. As, either a stand-alone claims processing system, or integrated with the provider Practice Management System, the claim is instantly transmitted to the PASHealth network servers where the claim goes through an intensive verification process and sent directly to the insurance carrier for direct reimbursement to the provider.

The entire process is 100% paperless, secure and takes about 45 seconds to complete. The provider can access daily and monthly transaction reports. The data can also be provided in electronic format for integration with practice management software.

Claim Status Response

Does your practice management system have the capability to conduct claim status and claim tracking transactions? You no longer have to pay for an upgrade or on-going support of your PMS to conduct these time saving requests. By utilizing the PASHealth Web Based Portal System, you will reduce your costs, reduce your time on the phone calling payers, reduce lengthy times on hold, all by conducting your requests online and receiving your claim status response in mere seconds. All responses are printable and easy to read for quick reference. Make your billing and collections a simple and efficient process by using the PASHealth Web Portal Claims System.

Electronic Remittance Advice

The Electronic Remittance Advice (ERA) will transmit payment details from the payer. You can print and post payments to your practice management system. Eliminate the wait for mailed explanation of benefits by posting immediately from your ERA notification. If your system is able to accept a HIPAA compliant 835 ERA transactions, you can upload the ERAs and eliminate all data entry for payments into your practice management system. Save time on data entry of payments and avoid entry errors and the mail delays related to explanation of benefits and add extensive improvements to your billing processes today. This transaction adds even more value when you accept electronic funds transfer from participating payers representing a full and complete electronic financial cycle.

FORM CAPTURE D-PAS

Information is often called the lifeblood of a healthcare practice and the ability to gather, process, analyze and protect data, can be the determinant factor between its success and failure. Today, handwritten documentation still serves as one of the most fundamental and reliable ways of capturing patient information. These handwritten patient eligibility forms or medical record documents are often transcribed and manually entered into a database or patient information system in order to begin most healthcare business processes. In addition, these paper forms are usually scanned in order to render them in a digital format. This is an arduous and time consuming process, prone to human error and unnecessary redundancies.

Many solution providers continue to ask the question: "How can we streamline day-to-day healthcare paperwork processes without disrupting the simplicity of using ordinary pen and paper?"

The Power of D-PAS

D-PAS utilizes digital pen & paper, a component of Anoto technology, to capture handwritten information, transfer it into a digital form and utilize the data to initiate workflows in a secure environment. Patients medical history and patient records are securely used to initiate necessary workflows digitally, securely and much more efficiently, empowering the healthcare business process. D-PAS is a product of Patient Access Solutions, Inc., a technology solutions provider focused on quality and service within the healthcare community, with an overall focus of using innovative and secure technology to facilitate their client's needs.

ELECTRONIC MEDICAL RECORDS (EMR)

Real-time Gathering of Patient Data

In the complex process of selecting EMR technology, PASHealth makes it simple...Just use a Pen and Paper.

D-PAS technology promises to capture electronically handwritten and form documentation in the familiar context of writing with pen and ink. This comes with the added bonus of an almost instant conversion or download into the digital environment of a computer and other electronic media.

D-PAS technology promises to expedite the capturing, saving and dissemination of clinical data i.e. produce and facilitate EMRs.

D-PAS enables the collection and digitalization of written notes, as forms or as free text, including sketches, which can easily be incorporated into the EMR. Traditional paper handling activities such as scanning, transcribing and other storage and processing can be significantly minimized. Potential applications include clinical documentation (i.e. progress notes, assessment and intake forms, surgery drawings etc.) as well as billing and “back office” utilities such as record archiving and access.

D-PAS utilizes digital pen & paper, to capture handwritten information, transfer it into a digital form and utilize the data to initiate workflows in a secure environment. Patients’ medical history and patient records are securely used to initiate necessary workflows digitally, securely and much more efficiently, empowering the healthcare business process.

Advantages of the D-PAS system include ease of use and low need for training: The pen and paper format is intuitive and in common use.

- CLINICAL DOCUMENTATION
- RECORD ARCHIVING & ACCESS
- BILLING

PAYMENT PROCESSING

Twenty-eight percent of medical practices still don't accept credit cards, according to a survey by SK&A Information Services.

If your practice does not currently have a written financial policy, you may consider developing one and deciding if it will be mailed or given to every patient in your practice or hospital.

The policy should be tailored to your specific practice or specialty and outline how your office personnel handle patient billing, insurance filing and payment plans.

In today's economy, healthcare and dental providers, hospitals and other healthcare institutions demand a full service suite of solutions with which to operate their company. Patient Access Solutions Inc. has responded to these needs by building turnkey payment service solutions for the receipt of patient self pay receivables. Healthcare providers and organizations will have the ability to accept credit cards, debit cards, healthcare savings account cards and other electronic payment methods such as check truncation transactions.

The key to our success has been our ability to provide healthcare providers and organizations with proven payment solutions that provide their patients with the payment flexibility they need.

PAS works with each healthcare provider and organization in assessing their payment acceptance strategy and helps to configure their operations and processes to maximize efficiencies, grow their business by receiving payment at time of service, and improve their bottom line.

TRANSFORMING HEALTHCARE INFORMATION TECHNOLOGY

EXECUTIVE SUMMARY

Introduction

The “business of medicine” has overwhelmed the “practice of medicine”. Patient Access Solutions Inc. (PASHealth) is a Healthcare Solutions company with its sights set on shaking up an exciting healthcare information technology industry. Paying little respect to tradition in a business rooted in tradition, PASHealth has created a formidable array of technology, resources and allies to enable it to become an agent of radical change in what has traditionally been a slowly evolving healthcare environment.

The PASHealth Web Portal System including Digital writing capabilities (D-PAS) is a total healthcare transaction processing solution. The PAS Web Portal System improves processing efficiencies and significantly reduces administrative expenses for physician practices, hospitals, medical centers, clinics and the insurance payers.

Corporate History

Patient Access Solutions Inc. was incorporated in 2006. Recognizing that healthcare is the largest industry in the world and that it offers many opportunities to capture data and complete transactions electronically, the Company began to apply its technology knowledge in this marketplace. Patient Access Solutions, Inc., as a technology solutions provider is focused on quality and service within the healthcare community, with an overall focus of using innovative and secure technology to facilitate their client’s needs.

Having invested fourteen years into the industry, the principals of PASHealth developed a single sign-on, web-based, ASP platform which offered electronic medical verification and claims processing system. In the latter part of 2007 PASHealth signed an exclusive sales and distribution contract for the healthcare industry adding a digital data capture process (D-PAS)

into the PASHealth Web Portal System. D-PAS is powered in conjunction with digitalpaperwork LLC, Anoto technologies and Expedata, a division of Standard Register. (Symbol SR-NYSE) With this enhancement, PASHealth is able to offer today, one of the most powerful patient verification/medical eligibility, patient data capture, medical record and billing systems available anywhere.

The System

The PASHealth Web Portal System offers electronic medical eligibility, electronic referrals, and service authorizations, electronic claims processing, drug formularies, electronic prescriptions, electronic medical records and patient data, automating the labor intensive and expensive manual process currently used by many facilities and healthcare providers.

D-PAS utilizes digital pen & paper, to capture handwritten information from the doctor or office personnel, transfer it into a digital form into the PAS web portal and utilize the data to initiate workflows in a secure environment. A patients’ medical history and patient records are used to initiate necessary workflows within the web portal, securely and much more efficiently, empowering the healthcare business process. In addition, the Web Portal System offers a complete suite of self pay receivable management solutions for the healthcare facilities.

Market Opportunity and Strategy

The current market for healthcare IT is estimated at \$25 billion and growing at about a 10% per year compound growth rate. The fastest growing components of the industry are expected to be external services and software, with annual growth of about 15%. Internal healthcare IT spending is projected to be relatively flat, however, growing at only around 3% per year. These trends point toward the increased use of outsourcing and ASP service platforms to companies like Patient Access Solutions.
